PROFESSIONAL SUMMARY

Results-driven and quantitative Data Analyst holding an M.Sc. in Data Science (9.09 CGPA) with proven expertise across Advanced SQL, Python (Pandas, NumPy, SciPy, Statsmodels), Power BI, Tableau, Looker Studio, and Advanced Excel. Proven track record across corporate internships and analytics projects in automating cross-departmental MIS reporting pipelines (Google Apps Script, AppSheet), reducing turnaround latency by 45%, and optimizing database query performance by 30%. Demonstrated success in architecting end-to-end data pipelines, developing statistical A/B testing frameworks with Multi-Touch Attribution, engineering rule-based GST compliance audit engines, optimizing multi-modal supply chain operations, and authoring research on hybrid transformer NLP models for real-time financial sentiment classification.

EDUCATION

Dr. D. Y. Patil ACS College

Master of Science in Data Science – CGPA: 9.09/10.0

Pune, India

Aug 2023 – May 2025

MGM University

Bachelor of Science in Data Science – CGPA: 7.81/10.0

Aurangabad, India

Jan 2021 – May 2023

TECHNICAL SKILLS

Analytics & BI: SQL, Advanced Excel, Power BI, Tableau, Looker Studio, Pivot Tables, Power Query, DAX, VBA, Dashboard Creation, KPI Reporting, Stakeholder Presentation

Languages & Databases: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, SciPy, Statsmodels, MySQL, PostgreSQL, SQLite, PL/SQL, PySpark

Data Engineering & Modeling: Exploratory Data Analysis (EDA), Statistical Testing, A/B Testing, Cleansing, Wrangling, Schema Design, ETL Pipelines, Data Governance, Lineage Tracking, Root Cause Analysis

Tools & Automation: Google Apps Script, AppSheet, Git, GitHub, JIRA, Draw.io, Streamlit, Process Mapping, Functional Documentation, AWS SageMaker, Linux

EXPERIENCE

Management Information System (MIS) Executive Intern

Feb 2026 – Jun 2026

Ajay Engineering Tools

Pune, India

- Supervised daily operational workflows across 5+ business units, preserving 99.5% accuracy and reclaiming 15 staff hours weekly.
- Automated cross-departmental reporting pipelines via Google Apps Script, mitigating manual processing mistakes and cutting turnaround duration by 45%.
- Designed 10+ interactive Looker Studio portals to convert transaction telemetry into actionable metrics for leadership.
- Implemented AppSheet mobile applications for shop-floor tracking, boosting inventory accuracy by 35% and curbing variance by 20%.

Data Analyst Intern

Jan 2025 – Jun 2025

Internship Studio

Remote

- Validated relational queries across 50,000+ transaction records to eliminate structural inconsistencies, raising database reliability by 25%.
- Executed exploratory data analysis (EDA) using Python and Pandas to support seamless enterprise system migrations.
- Assessed performance metrics across Sales, Marketing, and Consulting sectors to establish standardized business compliance reports.

Data Research Analyst Intern

Dec 2023 – Mar 2024

Pratiti Technologies

Pune, India

- Audited meta-information across 120+ corporate datasets, strengthening governance standards and meeting regulatory requirements.
- Constructed Power BI and Tableau visualization suites fed by SQL pipelines to track executive KPIs and financial trends.
- Streamlined data extraction procedures, accelerating query speeds by 40% across internal analytical workflows.
- Mentored 4 junior analysts on data validation protocols, reporting best practices, and visualization standards.

Data Analyst Intern

Jan 2023 – Jun 2023

S4S Tech Services

India

- Optimized SQL script performance, decreasing runtime by 30%, while employing Excel Pivot Tables to summarize executive summaries.
- Formulated financial liquidity and ROI algorithms utilizing Excel VBA and complex formulas, reducing daily preparation overhead by 50%.
- Examined monthly financial variances and transactional logs to resolve operational bottlenecks and sustain 99%+ output quality.

PROJECTS

- Marketing Campaign ROI & A/B Testing Attribution Pipeline** | *Python, SciPy, Statsmodels, MySQL* Sep 2026 – Oct 2026
- Designed an experimentation analysis pipeline evaluating 100,000 user assignments across Control and Treatment variants.
 - Conducted statistical hypothesis testing (Chi-Square, Two-Proportion Z-Test, Mann-Whitney U), measuring a conversion rate increase from 8.62% to 10.51% ($p < 0.001$, 95% CI for lift: [+1.52%, +2.26%]).
 - Implemented a Bayesian Beta-Binomial conjugate updating model with 100,000 Monte Carlo draws, confirming a 99.7% posterior probability of treatment superiority.
 - Developed Multi-Touch Attribution models (First-Touch, Last-Touch, Linear, Time-Decay) across 5 channels, identifying that Search (3.94x Linear ROAS) and Email (4.30x) delivered higher acquisition efficiency than Display (1.02x).
 - Executed subgroup cohort analysis with Bonferroni multiple testing correction across 22 segments, isolating Premium (+34.8% lift) and Mobile (+32.1%) cohorts as primary responders.
- Automated GST Tax Compliance Audit & ITC Recovery Pipeline** | *Python, MySQL, Regex, Governance* Aug 2026 – Sep 2026
- Developed a rule-based tax compliance audit pipeline analyzing 50,000 B2B invoice records across 18 Indian state jurisdictions.
 - Engineered automated validation logic detecting statutory Place-of-Supply discrepancies (13.2% inter-state transactions incorrectly charged with CGST/SGST instead of IGST) and HSN tariff code rate deviations.
 - Implemented regex validation for 15-digit GSTIN structures, flagging 2,563 invalid buyer identifiers and identifying eligible unfiled Input Tax Credit (ITC) recovery opportunities.
 - Authored 10 MySQL analytical queries utilizing Common Table Expressions (CTEs) and Window Functions to compute monthly 3-month rolling ITC claim rates and rank vendor compliance tiers.
- Supply Chain Operations & Freight Cost Optimization Analytics** | *Python, MySQL, Pandas, Seaborn* Jul 2026 – Aug 2026
- Built a multi-table supply chain analytics pipeline on 60,720 records covering 500 products, 200 suppliers, and 20 distribution hubs.
 - Benchmarked freight costs per kilogram across transport modes (Road: 12.98/kg, Rail: 6.98/kg, Air: 89.75/kg, Sea: 4.02/kg), modeling cost reduction opportunities through Air-to-Road mode shifting for non-urgent shipments.
 - Developed a composite vendor performance scorecard evaluating On-Time Delivery (OTD), quality ratings, and delay days to segment 200 suppliers into Preferred, Standard, and At-Risk tiers.
 - Analyzed 10,000 daily inventory snapshots to isolate slow-moving SKUs with inventory turnover $< 2\times$, generating an 8-panel operational dashboard.
- Insurance Customer Lifecycle & Data Governance Pipeline** | *Python, SQL, SQLite, Git* Jun 2026 – Jul 2026
- Engineered an ETL pipeline ingesting 50,000 policy, claims, and renewal records into a curated Data Warehouse fact table (fact_policy.lifecycle).
 - Implemented automated SQL transformation queries computing core insurance KPIs including Loss Ratio (Approved Claims / Written Premium) across Auto (0.84x), Health (0.68x), and Property (0.42x) lines.
 - Authored a formal Enterprise Data Dictionary and source-to-target data lineage mapping, maintaining schema completeness and referential integrity.

RESEARCH & PUBLICATIONS

- Hybrid NLP Pipeline for Real-Time Financial Sentiment Analysis** | *Author: Chetan G. Patil* Jan 2024 – Mar 2024
- Research Focus: Real-time sentiment classification and market polarity extraction from unstructured financial news feeds and regulatory disclosures.
 - Developed a hybrid transformer architecture combining BERT contextual embeddings with specialized classification layers, achieving a 91.4% macro F1-score on domain text.
 - Engineered high-throughput preprocessing, tokenization, and vectorization pipelines supporting streaming text processing of 1,000+ payloads/second with sub-100ms inference latency.
 - Evaluated model robustness across market cycles using stratified k-fold cross-validation and confusion matrix error auditing.
